Report Criteria:
 Data collection rating
 ≥ 90 • Minimum herd size
 25 • Strings included when
 representing different breeds
 from same herd • Official
 tests only.

Why ECM?
 Herds that produce more milk or higher components have higher profitability. Using only milk or components is too narrow of a view and does not assess profitability accurately. For that we need a broader view, such as ECM. ECM levels the playing field by adjusting to a standard. ECM is calculated based on the amount of energy in milk using it's fat and protein content. Milk volume is adjusted to 3.5% F and 3.2% P component values.

It doesn't get any easier than this!

MILK PREGNANCY TEST

- Confirm pregnancy anytime 28-days post breeding.
- Eliminates time and labor to sort, restrain and sample animals.
- Saves time and money.

Ask your CentralStar DHI Specialist to setup an automatic pregnancy testing plan, or tell them which cows you want tested.
