

AccelAIRate

Actively Improves Respiration

ON-FARM RESULTS:

- Data collected from large South Dakota dairy
- AccelAIRate added to the dry feed from day 1 through 90, then again 120 to 200 days
- Daily half-dose for an extended period to build animal immunocompetence
 - 20% Calf pellet (1.5 – 2.0 lbs DMI)
 - 18% Calf pellet (4 lbs. fed in TMR)
 - Animals started AccelAIRate August 2022
 - Data collected from 2022 & 2023
 - Pneumonia treatment reduced by up to **83%** - calves 1-90 days (Figure 1)
 - Pneumonia treatment reduced by up to **71%** - calves 91-200 days (Figure 2)
 - Average Daily Gain (ADG) increased by **.5 lb/head/day**

There are AccelAIRate success stories surfacing across the country! We invite you to share any that you hear! AccelAIRate is proving effective in multiple applications including being fed in milk replacer, whole milk, mixed into dry feed or top-dressed, and as an ingredient in calf pellets. We are here to assist your sales efforts and/or help determine application rates for producers wishing to customize a program that fits their individual calf feeding protocol.
